6. **Background And Basic Information Regarding Organization**
(Use additional pages, as necessary, to fully describe information required)

7. **Justification**
(Use additional pages, as necessary, to fully describe information required)

7.1 Intended Use Of Funds In Detail

To contribute towards the 19th Annual Golf Tournament to reach the Every Beat Counts campaign goals.

7.2 How Intended Use Of Funds Will Further Delivery Of Health Care Services Within Redbud Health Care District

Access to Care for Clearlake patients as the numbers are on the rise for heart disease..

7.3 Detailed Basis For Funds Requested

We are continuing to fundraise for our Every Beat Counts campaign in hopes we complete the second and final milestone goal by Q3 of 2024.

With your generous support of AHCL fundraising events last year, it contributed towards our first milestone of funding one S70N cardiac ultrasound device that is placed in Clearlake. As predicted, the need for use of the new AI device is so great that a second one will be placed on the other side of the county, to ensure the best access to care for our patients.

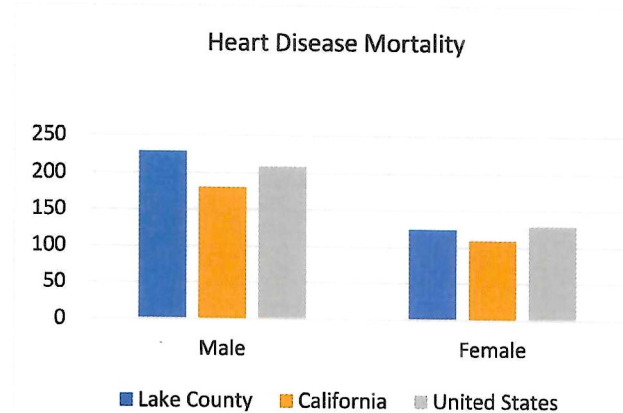

At the request of \$15,000 for our 19th Annual Golf Tournament, Redbud Health Care District would be gifted the option for:

Three teams of four
Recognition as presenting sponsor on all marketing materials
Additional dinner tickets for 12 for the closing tournament ceremony

We ensure that your funding would be applied towards the funding of the cardiac ultrasound located in Clearlake only. Fortunately, there have been additional donations throughout the first milestone of our campaign that have been designated for either location. The Philanthropy Manager would work diligently with the AHCL accounting team to ensure an internal transfer of your grant would be designated to Clearlake only.

Every Beat Counts – Case for Cardiac Ultrasound Testing

Heart disease is the No. 1 cause of death in the United States for men, women, and people of most racial and ethnic groups. Many people remain unaware of what a danger this condition poses to their health because there are usually no noticeable symptoms. Often people never find out they have heart disease until a heart attack, stroke or other cardiac event occurs.

Cardiovascular diseases, including heart disease and stroke, account for more than one-third of all U.S. deaths and a leading cause of disability. One person dies every 34 seconds in the U.S. from cardiovascular disease. In 2020, about 2 in 10 deaths from coronary artery disease happened in adults less than 65 years old. In the U.S., someone has a heart attack every 40 seconds.

Heart Disease is a term that encompasses a variety of different diseases affecting the heart. The most common type in the U.S. is coronary artery disease, which can cause heart attack, angina, heart failure, and arrhythmias.

Over 9% of Lake County Residents suffer from coronary heart disease. That's a rate higher than the state of California and the United States. In the last five years Lake County had 863 deaths caused by heart disease and stroke exceeding both the state and national rates. In the last three years, during the pandemic, these numbers have been climbing. Twelve percent of Lake County residents, 7,150 people or 1 in 9 people, are living with some type of heart disease.

Early detection of coronary heart disease is the key to preventing and treating heart attack and stroke. The Vivid S70N, powered by artificial intelligence, provides 3D imaging of the heart to support earlier diagnosis and medical treatment of heart conditions. The Vivid S70N is ultra-fast, ultra-precise and ultra-efficient, providing quicker exams and faster scan results. Currently, Lake County patients must travel out of the county to get these diagnostic services. Adventist Health Clear Lake is expanding our cardiac services to bring this innovative equipment closer to home for patients in Lake County.
